Symptom

A « Read Error » message is displayed. Only CTRL+ALT+DEL allows closing the RoadTracer application.

Problem description.

It originates from a corrupted .NVO file in the My Documents\RoadTracer\POI directory structure.

Resolution

In most cases it is the **iq_fw.nvo** in the My Documents\RoadTracer\POI directory that is responsible. Delete it or move it to another directory than POI.

That file is used to conduct the updates of your TRM GPS. If you have already performed that operation, delete it.
