

## Description

How to structure the (Long/Lat) coordinates I recorded by means of my RoadMaster.

e.g. : creating a file containing the locations of the hotels I noticed during a tour.

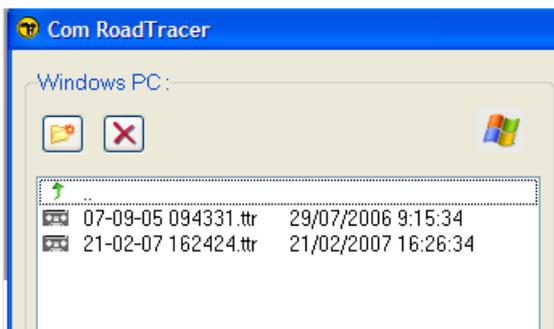

Reminder :

1. a long pressure on the « OK » knob of the RoadMaster, records (adds) a POI at the end of the « userpoi.nvo » file
2. If you are in the recording mode : a long pressure on the « OK » knob records a WayPoint

## Procedure

- Initiate a communication between the PC and your RoadMaster.
- If  is shown : double-click on it with the mouse left button to obtain the display below .

### AVANT

### APRES

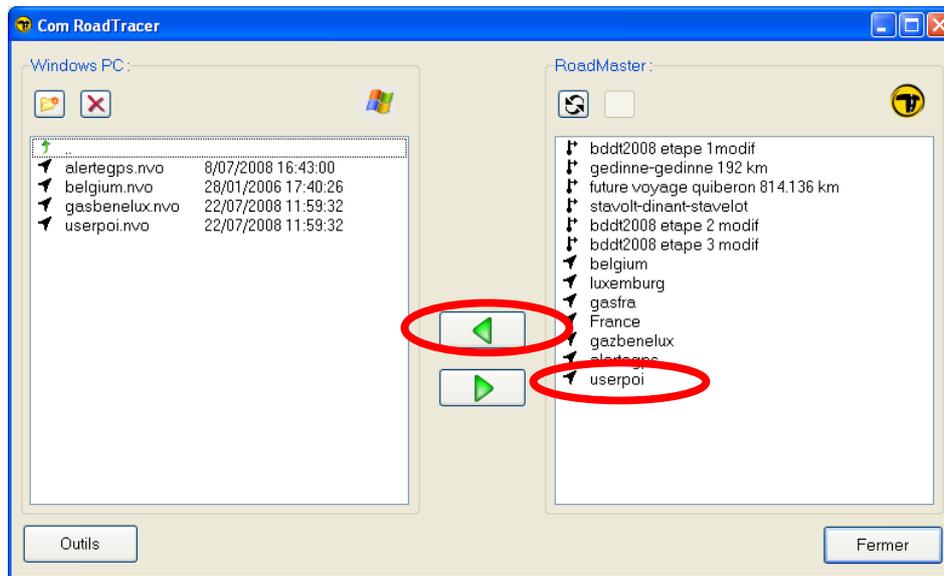

- Double-click on POI, then on Allpoi. And similarly to select the country where the recorded positions belong.

4) Select

 userpoi.nvo

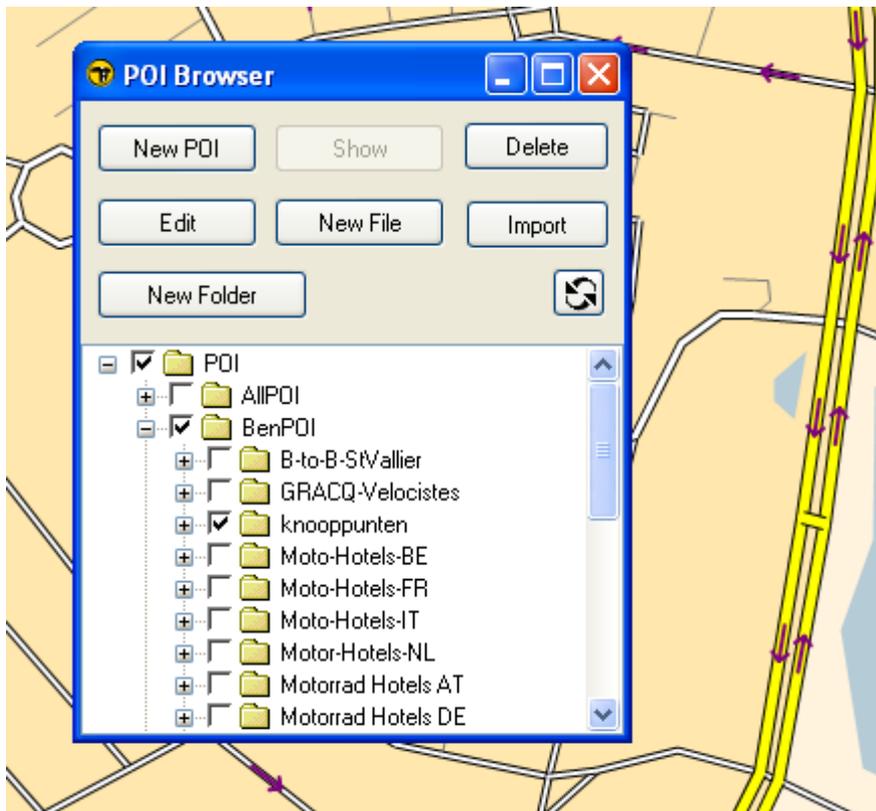

in the right hand side portion of the screen, and then

5) close that window, press F11 and then on  tu refresh the list.

6) Ensure that all levels down to the userpoi be check marked (Select all levels until for example AllPOI -> Belgium. (see next page).

- With the New File, you may create a file gathering a chosen type of points.

Example MotorClub.nvo contains the coordinates of the local Motorcycles clubs. To move an element (change coordinates) in « userpoi », select the point with the left mouse button pressed and drag it into the MotorClub.nvo.

- To rename: Double click on the file with the left mouse button and type the new name
